15-UUL-2002 (first entry)

Murine muscle ring finger protein 2 (MURF-2).

Muscle ring finger; MURF-2; mouse; cardiant; microtubule; intermediate filament; striated muscle; cardiac hypertrophy; heart disease.

Mus musculus.

MU200206318-A2.

24-JAN-2002.

18-JUL-2001; 2001WO-US022896.

18-JUL-2000; 2000US-0219020P.

(TEXA ) UNIV TEXAS SYSTEM.

Olson EN, Spencer JA;

MPI; 2002-241506/29.

N-PSDB; ABA99062.
```

Novel muscle ring finger protein useful for drug screening, and for diagnosing and treating diseases, particularly cardiomyopathies.

240

                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence represents murine muscle ring finger protein 2 (MURF-2). The invention relates to a purified muscle ring finger (MURF) protein, selected from MURF-1, MURF-2 and MURF-3. The MURF proteins of the invention are involved in microtubule and intermediate filament stabilisation of striated muscle cells and have cardiant activity. The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF, MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies

CC polypeptides. Also claimed is a polypeptide encoded by the polymucleotide
CC or its partial peptide, an antibody binding to the polypeptide or peptide
CC of the polynucleotide, immunologically assaying the polypeptide or peptide
CC of the polynucleotide by contacting the polypeptide or peptide
CC with the antibody of the encoded protein, and observing the binding
CC between the two, a transformant carrying the polynucleotide in an
CC expressible manner and an antisense polynucleotide. The oligonucleotide
CC is useful as a primer for synthesising the polynucleotide, or as a probe
CC proteins are useful as pharmaceutical agents and many disease related
CC genes may be included in them, for developing a diagnostic marker or
CC medicines for regulation of their expression and activity, or as targets
CC regeneration. Membrane proteins, signal transduction-related proteins,
CC transcription-related proteins, disease-related proteins and genes
CC encoding them can be used as indicators for diseases (e.g. osteoporosis,
neurological diseases, cancer, tumours. The cDNA may be used to regulate
CC the activity or expression of the encoded protein to treat diseases. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to new human cytoskeleton-associated protein (CSAP) and its polynucleotide. The polypeptide is useful for preparing a composition for diagnosing or treating a disease of condition associated with decreased expression or overexpression of functional CSAP e.g. atherosclerosis or cancer. The present sequence is human CSAP-8 protein. The invention is useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human cytoskeleton-associated proteins, useful for preparing composition for diagnosing or treating a disease or condition ass with decreased expression or overexpression of functional CSAP e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 452

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
                                                                                                              Sequence 5, Application Patent No. 6633819 GENERAL INFORMATION:
APPLICANT: Rzhetsky, Andrey
APPLICANT: Kalachikov, Sergey
ITILE OF INVENTION: GENE DISCOVERY THROUGH COMPARISONS
TITLE OF INVENTION: NETWORKS OF STRUCTURAL AND FUNCTIO
TITLE OF INVENTION: GENES AND PROTEINS
FILE REFERENCE: APP31869 070050, 1046
CURRENT APPLICATION NUMBER: US/09/327,983
CURRENT FILING DATE: 1999-06-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         446
                                                                                                                                                                                                                                                       301

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The MURF proteins of the invention are involved in microtubule and intermediate filament stabilisation of striated muscle cells and have cardiant activity. The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF, MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2590;

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel control of the polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or the polypucleotide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide control of the polynucleotide by contacting the polypeptide or peptide control of the polynucleotide by contacting the polypeptide or peptide control of the polynucleotide in an antibody of the encoded protein, and observing the binding control of the polynucleotide in an antibody of the encoded protein, and observing the binding control of the polynucleotide. The oligonucleotide control of the septime of the polynucleotide and encoded proteins are useful as pharmaceutical agents and many disease-related genes may be included in them, for developing a diagnostic marker or control of the sequence proteins, disease-related proteins and genes control of the control of the control of the sequence of the sequence of the sequence information supplied by the European Patent Office.

The control of the control of the control of the control of the sequence of the sequence of the sequence information supplied by the European Patent Office.
